

XWT TARGET CARRIER COLLECTION

Wireless Target Carriers for Military, Law Enforcement, and Commercial Training

The XWT Target Carrier Collection is InVeris' proven wireless target platform, designed to deliver reliable, low-maintenance operation across a wide range of live-fire training environments. All XWT models share a common architecture built around quiet, smooth carrier motion, programmable target movement, and intuitive wireless control.

XWT Platform Advantages

- Fully wireless target carrier operation
- Quiet, smooth movement for realistic training
- Closed track design for reduced debris interference
- No drive cables, pulleys, or power feed rails
- Reduced maintenance and downtime
- Supports basic qualification through advanced decision making exercises

Intended Environment	Indoor	Indoor	Indoor	Outdoor
Corrosion Protection	Paint / powder coat	Paint / powder coat	Paint / powder coat	Zinc plated + painted + stainless hardware

Product Summaries

XWT

The original wireless 360° turning target carrier, designed for advanced indoor training requiring target orientation, programmable movement, and high reliability. Available to commercial, law enforcement, and military customers.

XWT-Lite

A simplified version of the XWT platform that removes turning target capability while retaining the same wireless reliability and low-maintenance design. Ideal for indoor ranges that do not require target rotation. Available to commercial, law enforcement, and military customers.

XWT-Outdoor

Built on the original XWT dual-motor, 360° turning platform, XWT-Outdoor adds environmental sealing (IP54), corrosion-resistant construction, stainless hardware, and a MIL-STD-810H / IP69K-rated control tablet. Designed for permanent outdoor military and law enforcement live-fire ranges.

XWT-Pro

The most advanced member of the XWT Collection, XWT-Pro builds on the standard XWT platform and adds instant shooter feedback and enhanced safety awareness. Integrated high-definition cameras provide immediate shot placement feedback, while carrier hit detection alerts shooters and range personnel if a carrier is struck. A large 13" lane controller delivers a clear target view and intuitive operation for instructors and shooters.
